

WEEK 5

# SOFTWARE DEVELOPMENT TOOLS AND ENVIRONMENTS

UNLIMITED

Presented by **Asst. Prof. Dr. Tuchsanai Ploysuwan**

# To apply for Google Cloud, follow these steps

The screenshot shows the Google Cloud homepage with a dark header. The main heading is "Solve real business challenges on Google Cloud". Below it are two buttons: "Get started for free" and "Contact sales". A large central section is titled "Run workloads for free" and lists three options: "20+ free products for all customers", "\$300 in free credits for new customers", and "Start deploying pre-built solutions free". Below this is a section titled "Free Tier products" with four cards: Compute Engine, Cloud Storage, BigQuery, and Google Kubernetes Engine. Each card has a brief description and a right-pointing arrow.

**Solve real business challenges on Google Cloud**

[Get started for free](#) [Contact sales](#)

**Run workloads for free**

**20+ free products for all customers**  
All customers get [free hands-on experience](#) with popular products, including Compute Engine and Cloud Storage, [up to monthly limits](#).

**\$300 in free credits for new customers**  
New customers get [\\$300 in free credits](#) to fully explore and conduct an assessment of Google Cloud. You won't be charged until you upgrade.

**Start deploying pre-built solutions free**  
New customers get [\\$300 in free credits](#) on signup to use on deploying a dynamic website, launching a VM, building a three tier web app, and more [pre-built solutions templates](#).

**Free Tier products**

There is no charge to use these products up to their specified [free usage limit](#). The free usage limit does not expire, but is subject to change. Available for eligible customers.

**Compute Engine**  
Scalable, high-performance virtual machines.  
1 e2-micro instance per month →

**Cloud Storage**  
Best-in-class performance, reliability, and pricing for all your storage needs.  
5 GB-months Standard Storage →

**BigQuery**  
Fully managed, petabyte scale, analytics data warehouse.  
1TB queries per month →

**Google Kubernetes Engine**  
One-click container orchestration via Kubernetes clusters, managed by Google.  
One Autopilot or Zonal cluster per month →

<https://cloud.google.com/>

## Free trial credit

THB10,864

Free trial credit

---

Out of THB10,864

90

Days remaining

---

Ends February 24, 2024

You are not billed during your Free Trial. When the Free Trial ends, all resources you created during the trial are stopped and you will not be charged, unless you upgrade to a paid Cloud Billing account.

Please note: The Free Trial period cannot be paused or extended. The Free Trial ends after all available credits are consumed, or at the end of the Free Trial period, whichever happens first.

[ACTIVATE](#)

การสมัครใช้บริการ Google Cloud สามารถทำได้โดยขั้นตอนง่าย ๆ ดังนี้:

1. \*\*เข้าไปที่เว็บไซต์ของ Google Cloud Platform (GCP)\*\*:

- เปิดเบราว์เซอร์และเข้าไปที่ [\[https://cloud.google.com/\]\(https://cloud.google.com/\)](https://cloud.google.com/).
- คลิกที่ปุ่ม "Get started for free" หรือ "ลงทะเบียนใช้งานฟรี" ที่อยู่บนหน้าเว็บไซต์.

2. \*\*ลงทะเบียนหรือเข้าสู่ระบบด้วยบัญชี Google\*\*:

- ถ้าคุณมีบัญชี Google อยู่แล้ว (เช่น Gmail), คุณสามารถใช้บัญชีนั้นเข้าสู่ระบบ.
- ถ้าคุณยังไม่มีบัญชี Google, คุณจะต้องสร้างบัญชีใหม่.

3. \*\*กรอกข้อมูลการลงทะเบียน\*\*:

- คุณจะต้องกรอกข้อมูลส่วนตัว, เช่น ชื่อ, นามสกุล, และข้อมูลการติดต่อ.
- ทำการยืนยันอีเมลที่ใช้สมัคร.

4. \*\*กรอกข้อมูลการเงิน (เพื่อการยืนยันตัวตน)\*\*:

- แม้ว่า GCP จะเสนอเครดิตฟรีเมื่อคุณเริ่มใช้งาน, แต่ Google ยังคงต้องการข้อมูลบัตรเครดิตหรือบัญชีธนาคารเพื่อการยืนยันตัวตน.
- คุณจะไม่ถูกเรียกเก็บเงินจนกว่าจะใช้เครดิตที่ให้มาหมด.

5. \*\*อ่านและยอมรับข้อกำหนดการใช้งาน\*\*:

- ตรวจสอบและยอมรับข้อกำหนดและเงื่อนไขการให้บริการของ Google Cloud.

6. \*\*การตั้งค่าโครงการและการใช้งาน\*\*:

- หลังจากลงทะเบียนเสร็จสิ้น, คุณสามารถเริ่มต้นสร้างโครงการและใช้งานบริการต่าง ๆ ใน Google Cloud.

7. \*\*การยืนยันตัวตนและการเริ่มต้นใช้งาน\*\*:

- Google จะทำการยืนยันตัวตนผ่านโทรศัพท์หรือข้อความ SMS.
- หลังจากยืนยันแล้ว, คุณสามารถเข้าใช้งาน Google Cloud Console และเริ่มต้นใช้งานได้ทันที.

# LAB 1. Create a Project for GCP

**1. Google Cloud Platform. Projects allow you to organize all the resources in your account easily. Every time you create a compute, storage, or network resource,**

**2. you must assign it to a Project. Projects also contain their own unique set of users, APIs, and billing account information.**

The screenshot shows the Google Cloud Welcome screen. At the top left is the Google Cloud logo. Next to it is a button labeled "Select a project". A red circle highlights this button. To its right is a search bar with the placeholder "Search (/) for resources, docs, products, and more" and a "Search" button. The main area features a "Welcome" heading with a cloud icon. Below it, text reads "Create or select a project to get up and running with Google Cloud. [Learn more about projects](#)". There are two navigation links: "Dashboard" and "Recommendations". Below these are four buttons: "+ Create a VM", "+ Run a query in BigQuery", "+ Create a GKE cluster", and "+ Create a storage bucket". A "Try Gemini" button with an arrow is also present. The "Quick access" section contains eight boxes: API APIs & Services, IAM & Admin, Billing, Compute Engine, Cloud Storage, BigQuery, VPC network, and Kubernetes Engine. At the bottom is a "VIEW ALL PRODUCTS" button.

This screenshot shows a modal window titled "Select a project". It displays a list of projects under "RECENT": "tuchsanai". A red circle highlights the "NEW PROJECT" button at the top right of the modal. The modal has a "Search projects and folders" input field and a "CANCEL" button at the bottom right.

1. จาก ด้านบนพบว่า user:tuchsanai

## Step 1: Generate the SSH Key Pair

1. Open a Terminal: On your local machine, open a terminal window.
2. Navigate to the Desired Directory: Use the `cd` command to navigate to the directory where you want to save the key. If you're already in the desired directory, you can skip this step.
3. Generate the SSH Key Pair: Use the `ssh-keygen` command to generate a new SSH key pair. The key will be saved in the current directory with the name `mykey`. Run the following command:

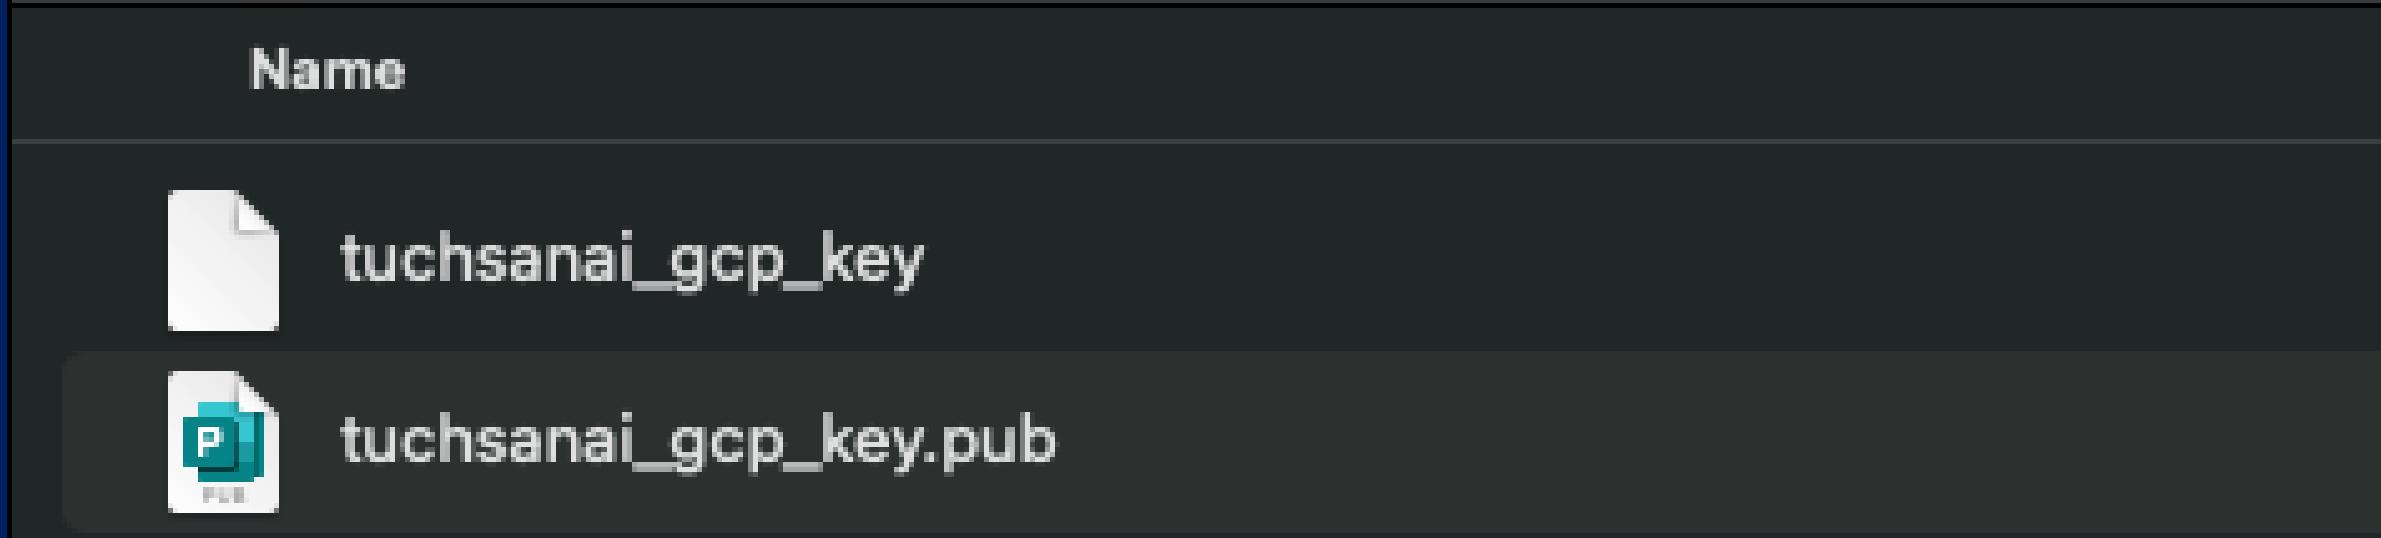

```
mkdir mykey
cd mykey
```

```
ssh-keygen -t rsa -b 2048 -C "tuchsanai" -f tuchsanai_gcp_key
```

- `-t rsa` : Specifies the type of key to create, in this case, RSA.
- `-b 2048` : Specifies the number of bits in the key, in this case, 2048 bits.
- `-C "username"` : Adds a comment to the key, here it is the username.
- `-f tuchsanai_gcp_key` : Specifies the filename and path of the key file.

2. ทำการสร้าง ssh key โดยใช้ user ของตัวเองดังรูป  
ปล. สร้าง key ให้สร้างใน local com นะครับ

```
(base) tuchsanai@Tuchsanais-MacBook-Pro mykey % ssh-keygen -t rsa -b 2048 -C "tuchsanai" -f tuchsanai_gcp_key
Generating public/private rsa key pair.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in tuchsanai_gcp_key
Your public key has been saved in tuchsanai_gcp_key.pub
The key fingerprint is:
SHA256:c/LRSpAWrVO8GrZm5Aa5QP6V4CcmLQXKXcVb4cowNEI tuchsanai
The key's randomart image is:
+---[RSA 2048]----+
| .E.+ooo.. |
| . o.+o..+= |
| oo.+oo+*.. |
| = B=@o.. |
| * XS=+ . |
| o B* o |
| + o |
+---[SHA256]----+
```

3. จะได้ File มา ทั้งหมด 2 files โดยที่  
**tuchsanai\_gcp\_key.pub** คือ public key  
**tuchsanai\_gcp\_key** คือ private key

```

SSH Keys

These keys allow access only to this instance, unlike project-wide SSH keys. [Learn more](#)

Block project-wide SSH keys  
When checked, project-wide SSH keys cannot access this instance. [Learn more](#)

SSH key 1 \*

Enter public SSH key

+ ADD ITEM

Identity and API access

Service accounts

You must stop the VM instance to edit its service account

Service account

Compute Engine default service account

Requires the Service Account User role (roles/iam.serviceAccountUser) to be set for users

SAVE CANCEL

5. นำ public key : tuchsanai\_gcp\_key.pub มาใส่  
\*\*ในช่องสุดท้าย\*\* โดยให้นำมากรอกแล้วกด enter  
จากนั้นให้กด save ด้านล่าง

## Step 2: Connect to a GCP Instance

1. **Find the External IP of Your Instance:** In the GCP console, go to the "VM instances" page and find the external IP address of the instance you want to connect to.

2. **Connect via SSH:** Use the SSH command to connect to the instance. Replace `[EXTERNAL_IP]` with the actual IP address:

```
ssh -i username.private username@[EXTERNAL_IP]
```

- `-i username.private` : Specifies the private key file for authentication.
- `username@[EXTERNAL_IP]` : The username and IP address of the GCP instance.

Following these steps, you should be able to generate an SSH key in your specified directory and use it to connect to your GCP instances securely. Remember to keep the private key (`mykey`) secure and private.

VM instances							
<input type="button" value="Filter"/> Enter property name or value							
<input type="checkbox"/>	Status	Name 	Zone	Recommendations	In use by	Internal IP	External IP

3

Store and retrieve your data Get started by creating a bucket – a container where you can organize and control access to your data and files in Cloud Storage.

**CREATE BUCKET** TAKE QUICKSTART

Google Cloud tuchsanai Search (/) for resources, docs, products, and more

Cloud Storage Buckets Monitoring Settings

Get Started Name: lab\_mlops\_01xxv

Choose where to store your data This choice defines the geographic placement of your data and affects cost, performance, and availability. Cannot be changed later. Learn more

Location type

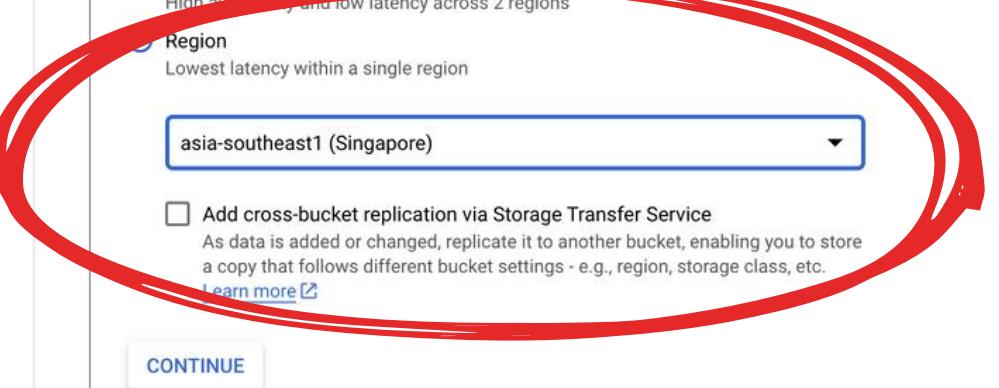

- Multi-region Highest availability across largest area
- Dual-region High availability and low latency across 2 regions
- Region Lowest latency within a single region

asia-southeast1 (Singapore)

Add cross-bucket replication via Storage Transfer Service As data is added or changed, replicate it to another bucket, enabling you to store a copy that follows different bucket settings - e.g., region, storage class, etc. Learn more

Get Started Pick a globally unique, permanent name. Naming guidelines

lab\_mlops\_01xxv

Tip: Don't include any sensitive information

Optimize storage for data-intensive workloads

Labels (optional)

CONTINUE

Choose where to store your data Location: us (multiple regions in United States) Location type: Multi-region

Choose a storage class for your data Default storage class: Standard

Choose how to control access to objects Public access prevention: On Access control: Uniform

Choose how to protect object data Soft delete policy: Default Object versioning: Disabled Bucket retention policy: Disabled

4

Google Cloud tuchsanai Search (/) for resources, docs, products, and more

Cloud Storage Buckets Monitoring Settings

Get Started Name: lab\_mlops\_01xxv

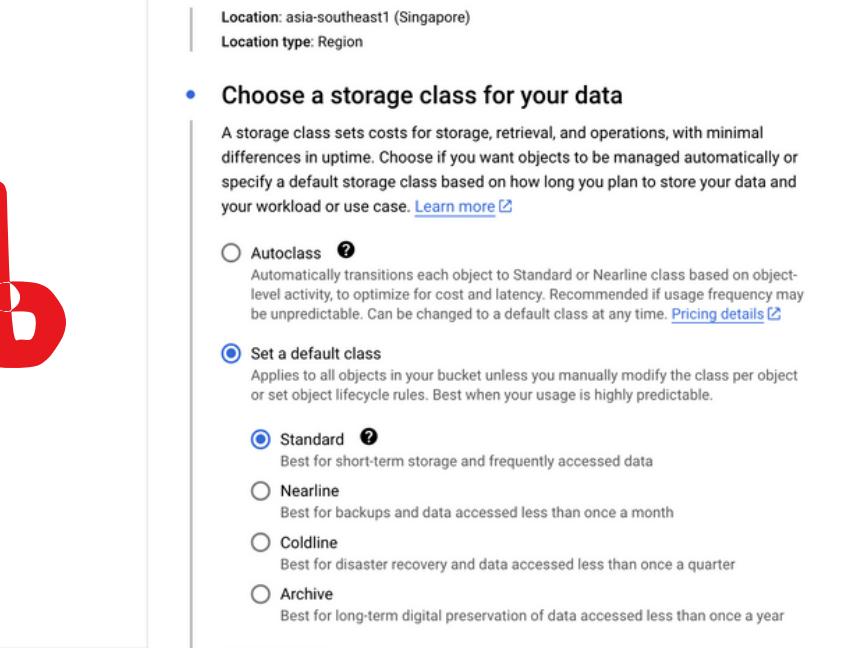

Choose where to store your data Location: asia-southeast1 (Singapore) Location type: Region

Choose a storage class for your data A storage class sets costs for storage, retrieval, and operations, with minimal differences in uptime. Choose if you want objects to be managed automatically or specify a default storage class based on how long you plan to store your data and your workload or use case. Learn more

- Autoclass Automatically transitions each object to Standard or Nearline class based on object-level activity, to optimize for cost and latency. Recommended if usage frequency may be unpredictable. Can be changed to a default class at any time. Pricing details
- Set a default class Applies to all objects in your bucket unless you manually modify the class per object or set object lifecycle rules. Best when your usage is highly predictable.
- Standard Best for short-term storage and frequently accessed data
- Nearline Best for backups and data accessed less than once a month
- Coldline Best for disaster recovery and data accessed less than once a quarter
- Archive Best for long-term digital preservation of data accessed less than once a year

Get Started Name: lab\_mlops\_01xxv

Choose where to store your data Location: asia-southeast1 (Singapore)  
Location type: Region

Choose a storage class for your data Default storage class: Standard

Choose how to control access to objects Public access prevention: On  
Access control: Uniform

Choose how to protect object data Your data is always protected with Cloud Storage but you can also choose from these additional data protection options to add extra layers of security.

Data protection

Soft delete policy (For data recovery) When enabled, this bucket and its objects will be kept for a specified period after they're deleted and can be restored during this time. [Learn more](#)

Use default retention duration All buckets have a 7 day soft delete duration by default, unless this default has been customized by your organization administrator.

Set custom retention duration Specify how long this bucket and its objects should be retained after they're deleted. Setting a "0" duration disables soft delete, meaning any deleted objects will be permanently deleted.

Object versioning (For version control) For restoring deleted or overwritten objects. To minimize the cost of storing versions, we recommend limiting the number of concurrent versions per object and scheduling them to expire after a number of days. [Learn more](#)

Retention (For compliance) For preventing the deletion or modification of the bucket's objects for a specified period of time.

## Network firewall policies

Firewall policies let you group several firewall rules so that you can update them all at once, effectively controlled by Identity and Access Management (IAM) roles. [Learn more](#)
