

Week 11 : SOFTWARE DEVELOPMENT TOOLS AND ENVIRONMENTS

Dockerfile and Docker Image

Dockerfile

- Dockerfile is instructions to build Docker Image
 - How to run commands
 - Add files or directories
 - Create environment variables
 - What process to run when launching container
- Result from building Dockerfile is Docker Image

Dockerfile

Sample Dockerfile

```
FROM node:14.15.0-alpine3.12 ← OS + System Packages
COPY . /nodejs/.           ← Source Code
WORKDIR /nodejs
RUN npm install             ← Library Dependencies
ENV VERSION 1.0            ← Configuration
EXPOSE 8081
CMD ["node", "/nodejs/main.js"]
```

Dockerfile reference

FROM <image:tag>	Sets the base image for subsequent instructions.
RUN <command>	Execute any commands in image.
CMD <command> <param1> <param2>	Sets the command to be executed when running the image.
LABEL <key>=<value> ...	Adds metadata to an image.
EXPOSE <port>	Informs Docker that the container listens on the specified network ports at runtime.
ENV <key> <value>	Sets the environment variable.
COPY <src> <dest>	Copies new files from source to the filesystem of the container at the path destinations.
ENTRYPOINT <command> <param1> <param2>	Command line arguments will be appended after all elements in an exec form ENTRYPOINT.
VOLUME ["/data"]	Sets mounted volumes from native host or other containers.
WORKDIR <path>	Sets the working directory for any commands.

How to create my own image?

Dockerfile

```
FROM Ubuntu

RUN apt-get update
RUN apt-get install python

RUN pip install flask
RUN pip install flask-mysql

COPY . /opt/source-code

ENTRYPOINT FLASK_APP=/opt/source-code/app.py flask run
```

1. OS - Ubuntu

2. Update apt repo

3. Install dependencies using apt

4. Install Python dependencies using pip

5. Copy source code to /opt folder

6. Run the web server using “flask” command

```
docker build Dockerfile -t mmumshad/my-custom-app
```

```
docker push mmumshad/my-custom-app
```

Dockerfile

Dockerfile

INSTRUCTION

ARGUMENT

Dockerfile

FROM Ubuntu

Start from a base OS or another image

RUN apt-get update

RUN apt-get install python

Install all dependencies

RUN pip install flask

RUN pip install flask-mysql

COPY . /opt/source-code

Copy source code

ENTRYPOINT FLASK_APP=/opt/source-code/app.py flask run

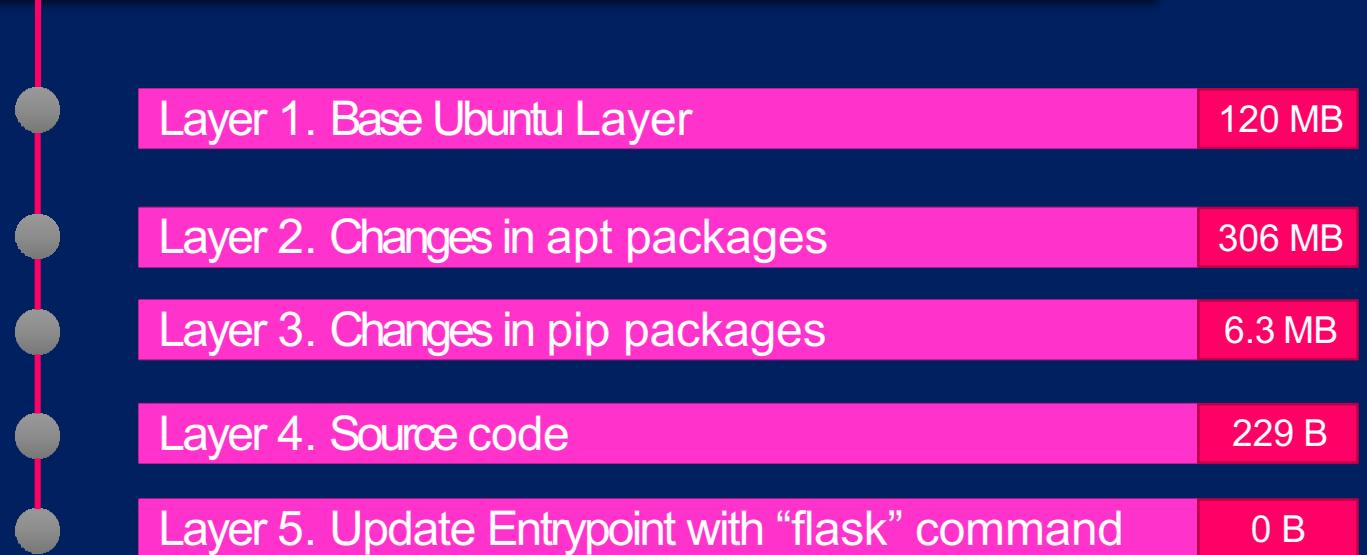

Specify Entrypoint

Layered architecture

Dockerfile

```
FROM Ubuntu  
  
RUN apt-get update && apt-get -y install  
python  
  
RUN pip install flask flask-  
mysql  
  
COPY . /opt/source-  
code  
  
ENTRYPOINT FLASK_APP=/opt/source-code/app.py flask run
```

docker build Dockerfile -t mmumshad/my-custom-app

```
root@osboxes:/root/simple-webapp-docker # docker history mmumshad/simple-webapp  
IMAGE          CREATED      CREATED BY                                         SIZE        COMMENT

LAB 0 and LAB 1 :

The screenshot shows a GitHub repository named `DevTools / 02_Docker / Week11 / 00_LAB_CMD_EntryPoint`. The commit history is as follows:

Name	Last commit message	Last commit date
Dockerfile-CMD	main edit	1 minute ago
Dockerfile-ENTRYPOINT	main edit	1 minute ago
readme.md	dd	4 minutes ago
readme.md		

Objective

The goal of this lab is to understand:

- How `CMD` and `ENTRYPOINT` instructions define a container's default behavior.
- The difference in behavior when using them separately and together.
- How to override the default behavior defined by these instructions.

Prerequisites

- Docker installed on your machine.

Lab Setup

create directory

```
mkdir LAB0_Week11
cd LAB0_Week11
```

git clone branch dev

```
git clone -b dev https://github.com/Tuchsanai/DevTools.git
```

cd DevTools/02_Docker/Week11/00_LAB_CMD_EntryPoint/

The screenshot shows a GitHub repository named `DevTools / 02_Docker / Week11 / 01_Lab_Dockerfile`. The commit history is as follows:

Name	Last commit message	Last commit date
...		
Dockerfile	ddd	1 hour ago
jupyter.png	dd	2 hours ago
readme.md	d	1 hour ago
requirements.txt	dd	2 hours ago
readme.md		

LAB Basic example of a Dockerfile for creating a lab environment with Python, Jupyter, and some essential data science libraries:

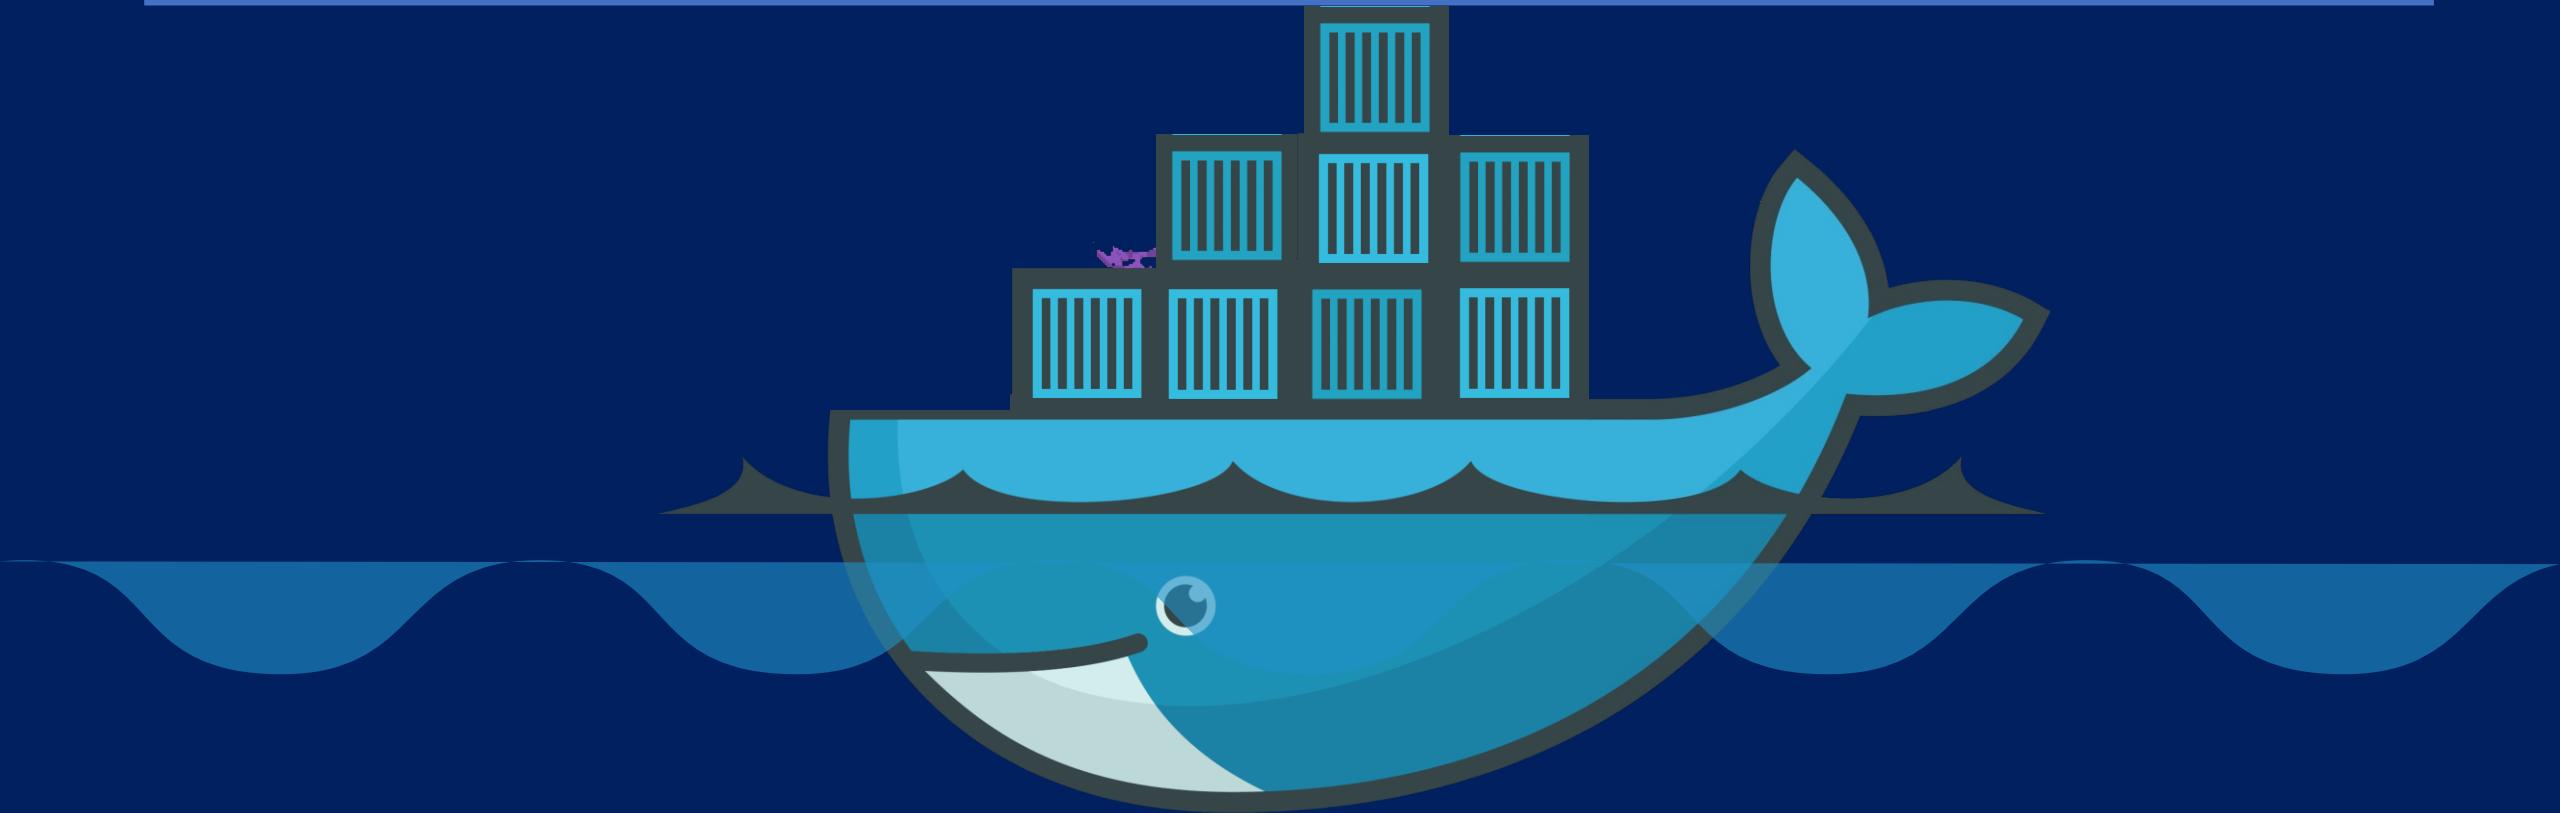

A Dockerfile is a script that contains instructions to build a Docker image. Here's a basic example of a Dockerfile for creating a lab environment with Python, Jupyter, and some essential data science libraries:

The screenshot shows a Jupyter Notebook interface with the URL `http://13.213.52.101:8885/tree?`. The sidebar shows the following file structure:

- Files
- Running
- Clusters

Name	Last Modified	File size
Dockerfile	3 นาทีที่แล้ว	509 B
readme.md	3 นาทีที่แล้ว	1.45 kB
requirements.txt	3 นาทีที่แล้ว	16 B

me

ACCESS PERMISSIONS
Read, Write, Delete

To use the access token from your Docker CLI client:

1. Run `docker login -u [REDACTED]`
2. At the password prompt, enter the personal access token.

dckr_pat_d0rTt42tz[REDACTED]QnZchI-kI

WARNING: This access token will only be displayed once. It will not be stored and cannot be retrieved. Please be sure to save it now.

Copy and Close

Image

image: docker.io/nginx/nginx

docker.io
Docker Hub

Screenshot of the Docker Hub web interface. The URL in the address bar is hub.docker.com. The navigation bar includes 'Explore', 'Repositories' (which is highlighted), and 'Organizations'. A search bar at the top right says 'Search Docker Hub'. Below the search bar, there is a dropdown menu set to 'tuchsanai', a search input field, a 'Create repository' button, and a 'All Content' dropdown. The main content area displays three repository cards for the user 'tuchsanai':

- tuchsanai / pytorch_jupyterlab_ubuntu22.04
Contains: Image | Last pushed: 3 months ago
Inactive ⚡ 0 ⚡ 41 Public
- tuchsanai / kubirstapp
Contains: Image | Last pushed: 5 months ago
Inactive ⚡ 0 ⚡ 14 Public
- tuchsanai / custom-nginx-registry
Contains: Image | Last pushed: 11 months ago
Inactive ⚡ 0 ⚡ 3 Public

To the right of the repositories, there is a sidebar with a 'Create An Organization' section featuring icons for a hexagon, a circle, and a triangle, and a link to 'Create and manage users and grant access to your repositories.'

Private Registry

```
▶ docker login hub.docker.com
```

Login with your Docker ID to push and pull images from Docker Hub. If you don't have a Docker ID, head over to <https://hub.docker.com> to create one.

Username: registry-user

Password:

WARNING! Your password will be stored unencrypted in /home/vagrant/.docker/config.json.

Login Succeeded

```
▶ docker run private-registry.io/apps/internal-app
```

Deploy Private Registry

```
docker build -t <your-dockerhub-username>/<image_repository_name>:tag .
```

```
docker push <your-dockerhub-username>/<image_repository_name>:tag
```

```
docker pull <your-dockerhub-username>/<image_repository_name>:tag
```

LAB 2:

The screenshot shows a GitHub repository interface for a project named '02_Lab_docker_registry'. The repository was created by 'Tuchsanai' 11 minutes ago. The commit message is '1fcb90e · 39 minutes ago'. The repository contains the following files:

Name	Last commit message	Last commit date
..		
images	11	39 minutes ago
Dockerfile	dd	6 hours ago
index.html	dd	6 hours ago
readme.md	11	39 minutes ago

The 'readme.md' file is currently being edited, showing the following content:

```
Lab docker registry

Step 1: Login to Docker Hub

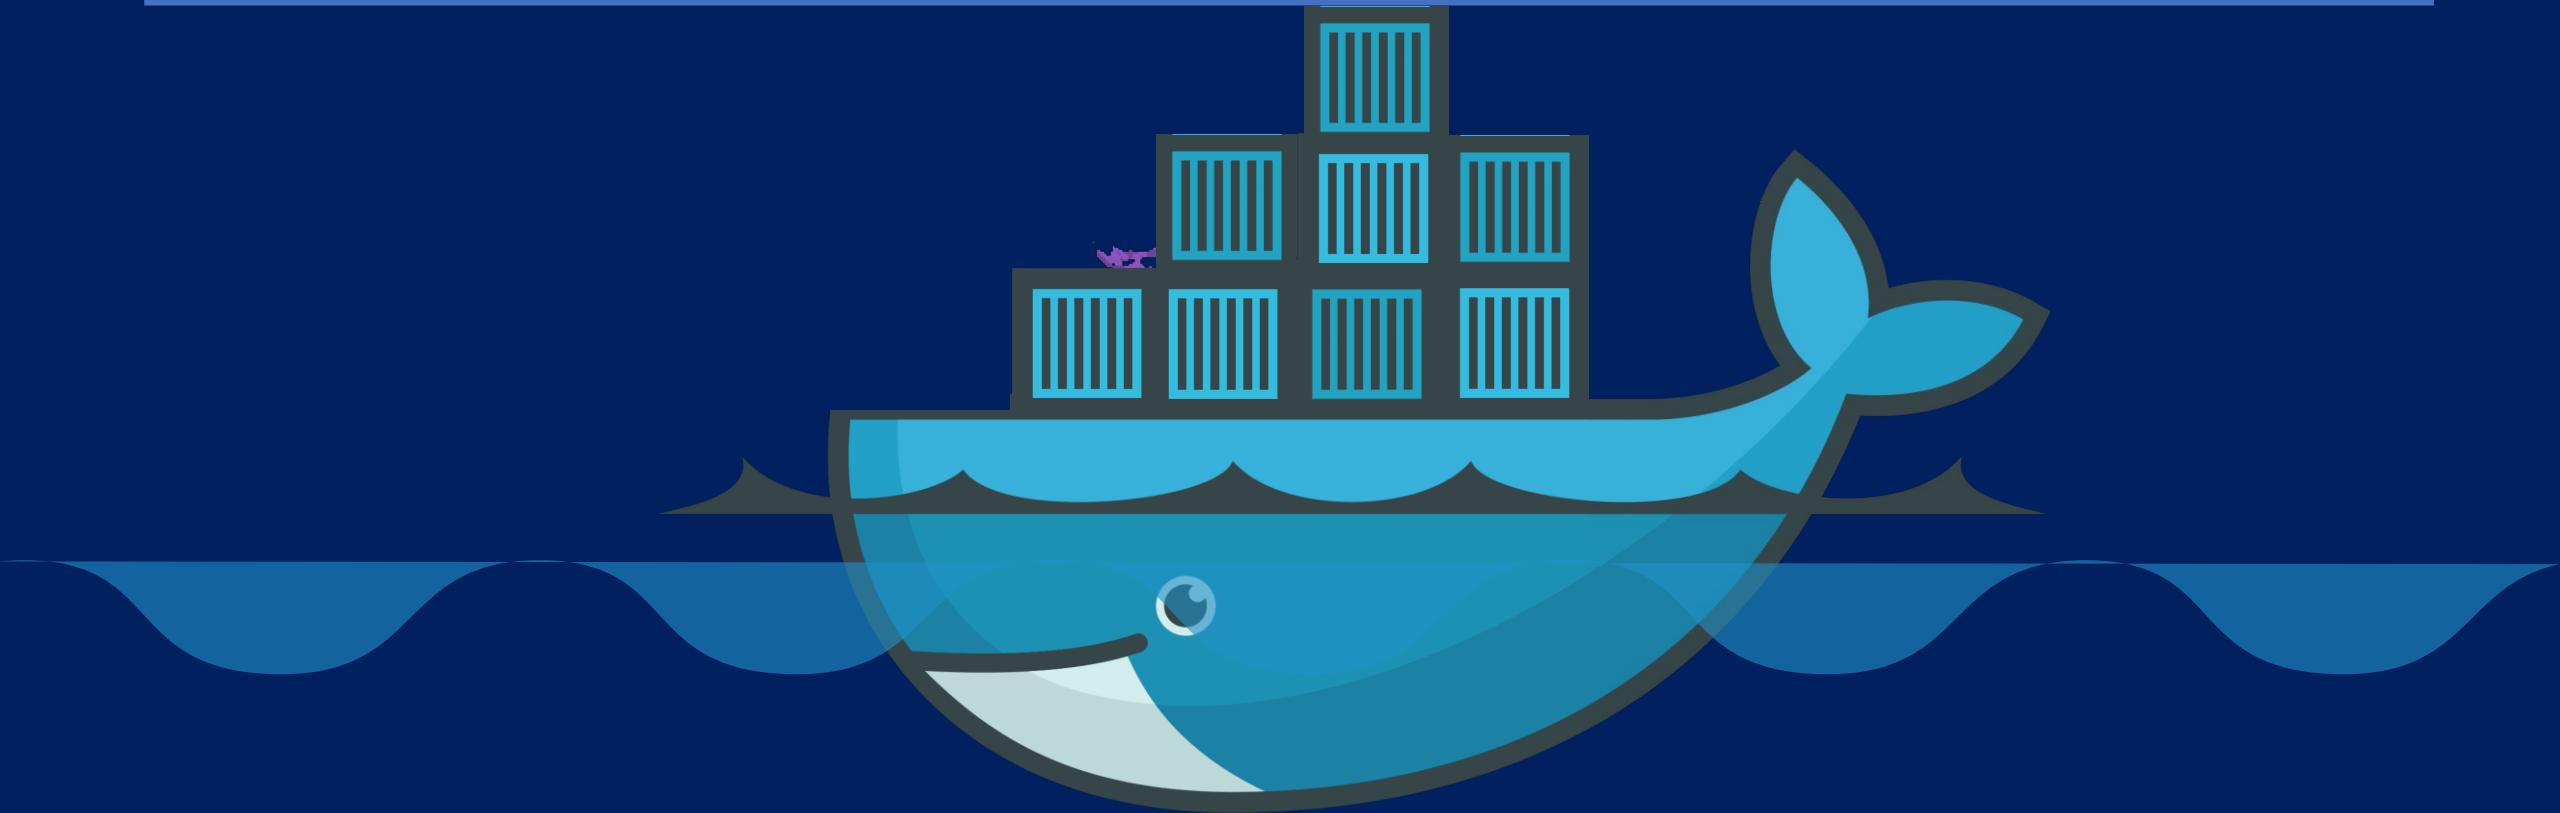

Run the following command to login to Docker Hub:

docker login -u yourusername

#### Enter your password when prompted.
.....
```

Step 2:

Docker Network

Default networks

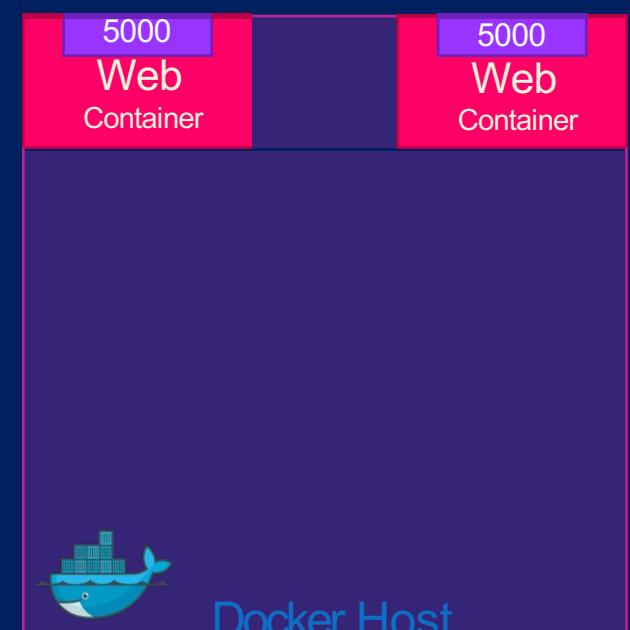

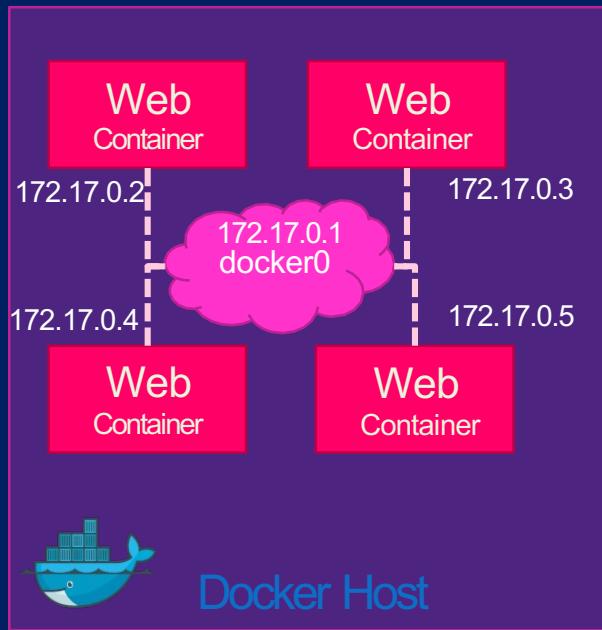

```
docker run ubuntu
```

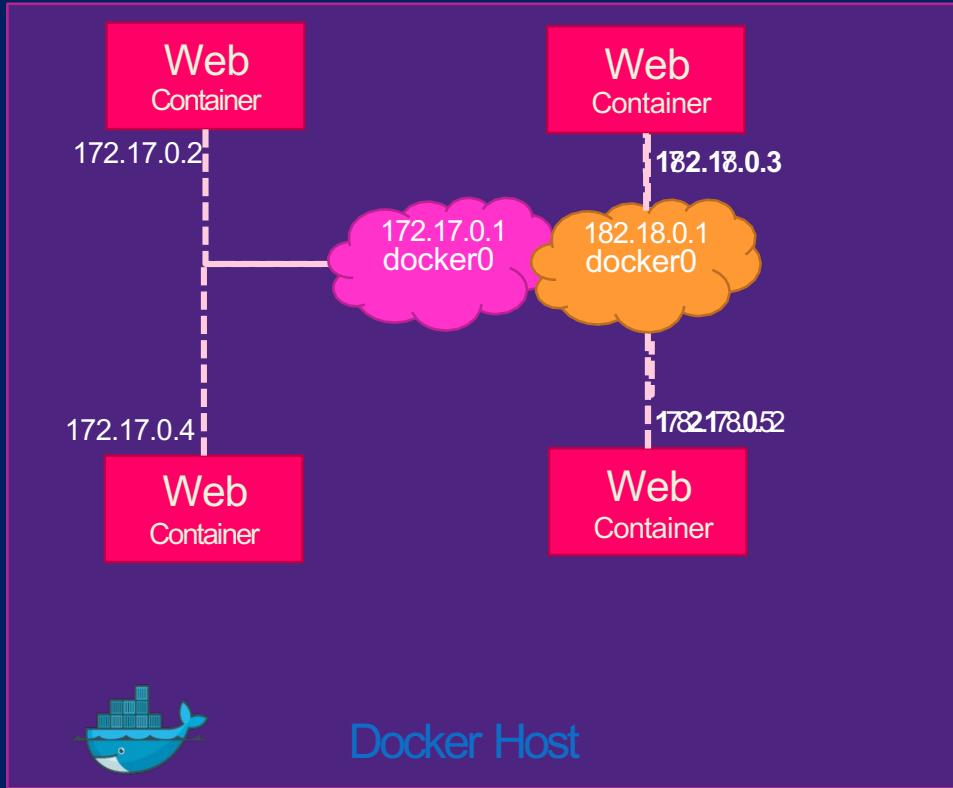

```
docker run Ubuntu --network=none
```

```
docker run Ubuntu --network=host
```

User-defined networks

```
docker network create \
--driver bridge \
--subnet 182.18.0.0/16
custom-isolated-network
```

```
docker network ls
```

NETWORK ID	NAME	DRIVER	SCOPE
dba0fb9370fe	bridge	bridge	local
46d476b87cd9	customer-isolated-network	bridge	local
6de685cec1ce	docker_gwbridge	bridge	local
e29d188b4e47	host	host	local
mmrho7vsb9rm	ingress	overlay	swarm
d9f11695f0d6	none	null	local

Inspect Network

```
▶ docker inspect blissful_hopper
```

```
[  
 {  
   "Id": "35505f7810d17291261a43391d4b6c0846594d415ce4f4d0a6ffbf9cc5109048",  
   "Name": "/blissful_hopper",  
   "NetworkSettings": {  
     "Bridge": "",  
     "Gateway": "172.17.0.1",  
     "IPAddress": "172.17.0.6",  
     "MacAddress": "02:42:ac:11:00:06",  
     "Networks": {  
       "bridge": {  
         "Gateway": "172.17.0.1",  
         "IPAddress": "172.17.0.6",  
         "MacAddress": "02:42:ac:11:00:06",  
       }  
     }  
   }  
 }]
```

Embedded DNS

```
mysql.connect( mysql )
```

Host	IP
web	172.17.0.2
mysql	172.17.0.3

LAB 3:

Lab Docker Network with Subnet

This guide explains how to create a lab Docker network with a specific subnet using a busybox container.

1. Create a new Docker network named "lab_network" with a specific subnet, e.g., 192.168.100.0/24, using the following command:

```
docker network create --subnet 192.168.100.0/24 lab_network
```

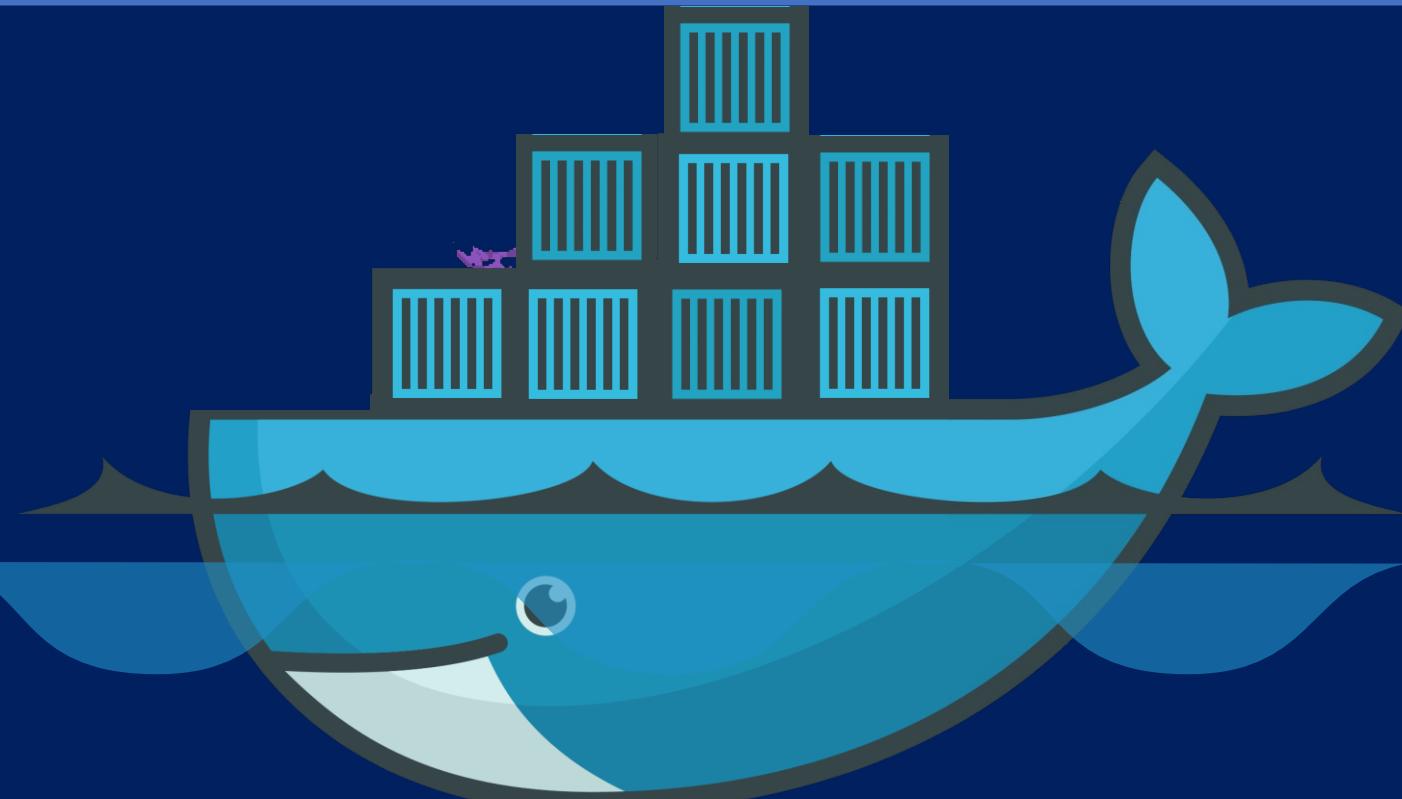

2. To confirm that the "lab_network" has been created and to view its settings, run the following command:

```
docker network inspect lab_network
```

3. Run a new container with the busybox image and connect it to the "lab_network" using the following command:

```
docker run --name busybox_container --network lab_network busybox
```

Docker compose

Docker compose

```
docker run yourname/simple-webapp
```

```
docker run mongodb
```

```
docker run redis:alpine
```

```
docker run ansible
```

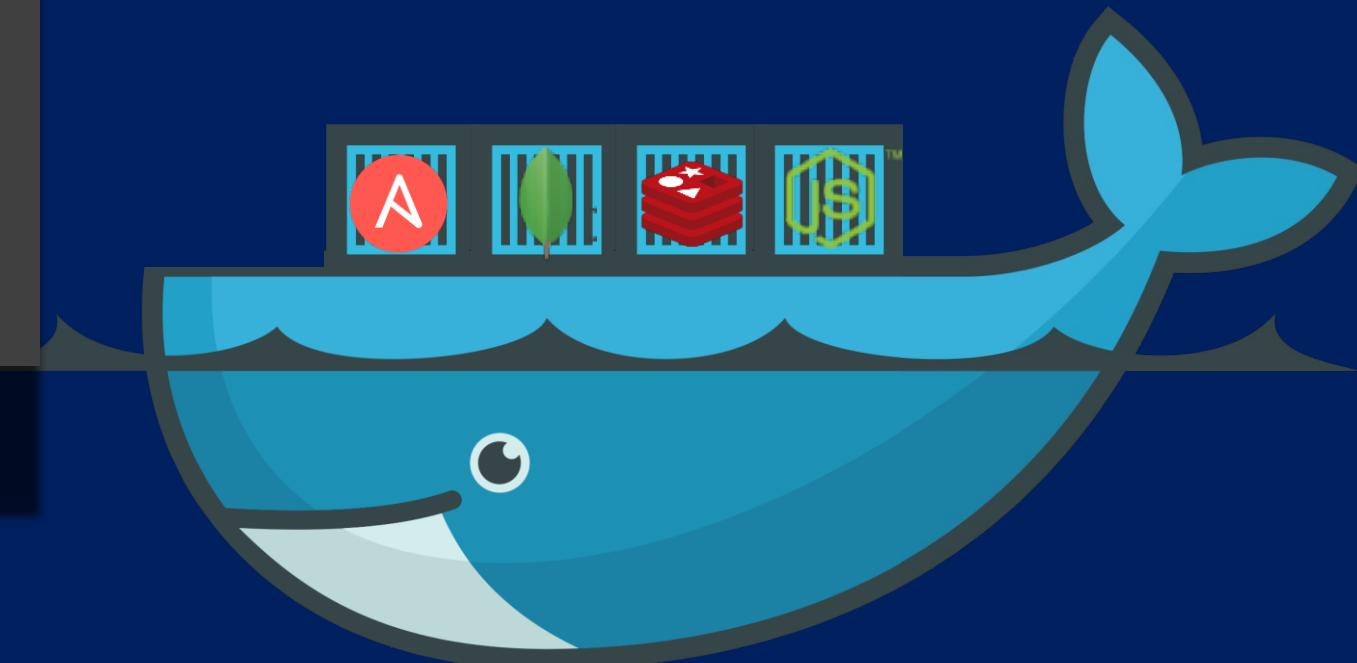

```
docker-compose.yml
```

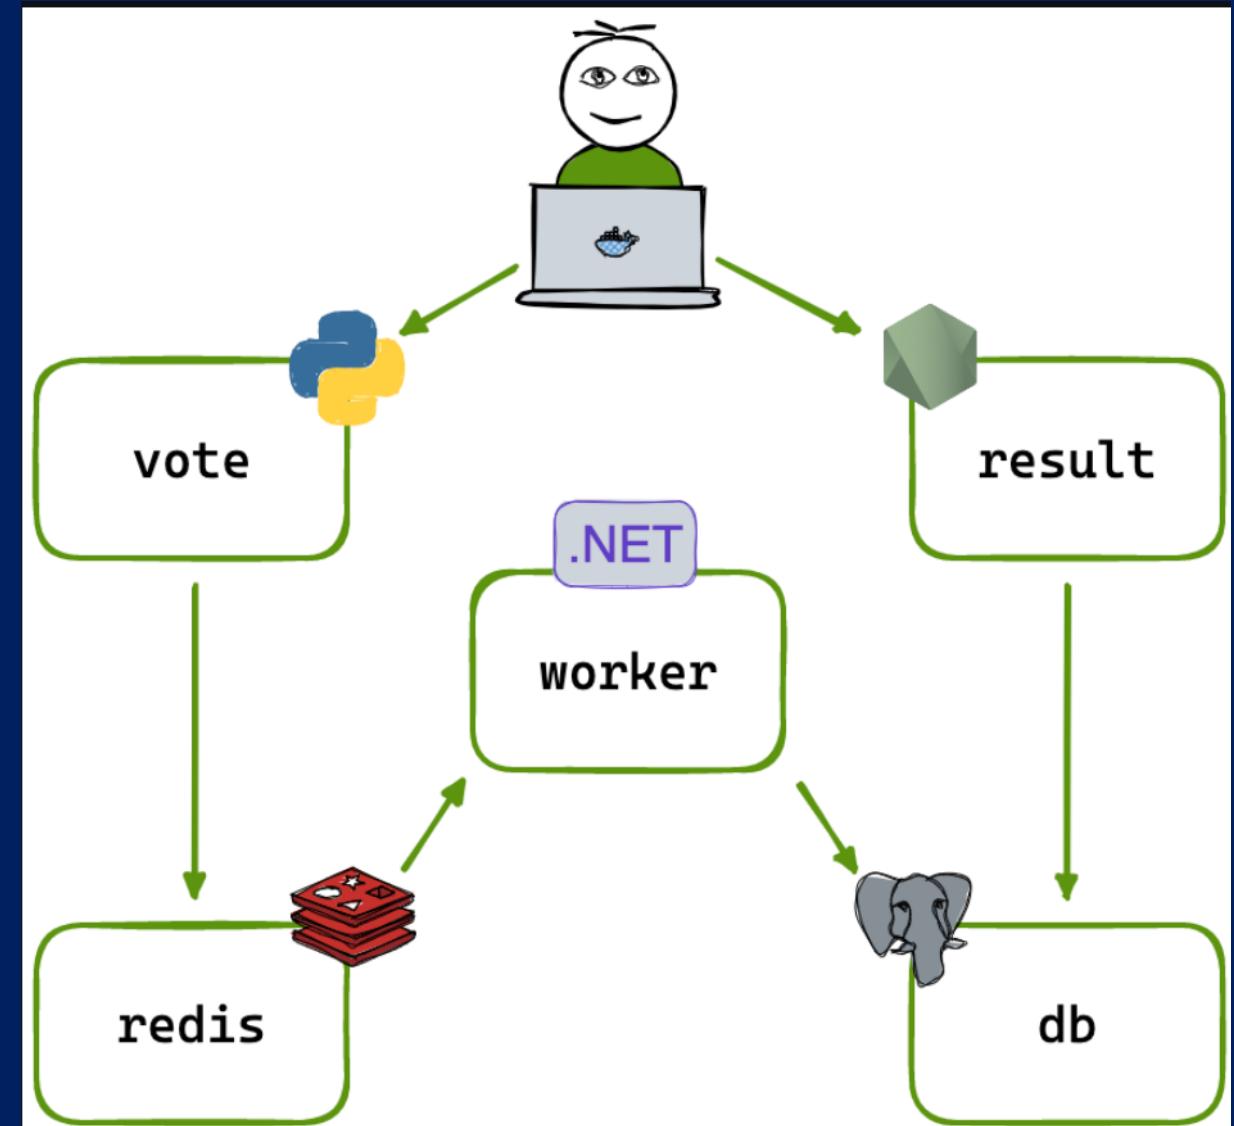

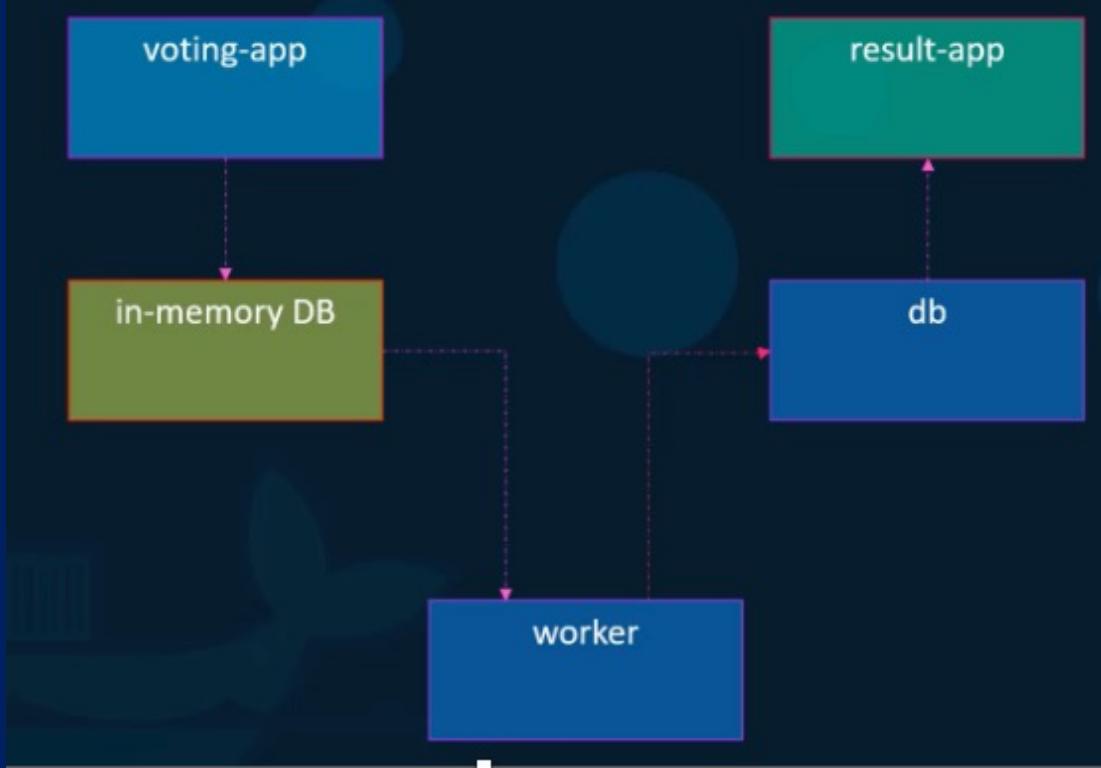

```
services:  
  web:  
    image: "yourname/simple-webapp"  
  database:  
    image: "mongodb"  
  messaging:  
    image: "redis:alpine"  
  orchestration:  
    image: "ansible"
```

```
docker-compose up
```

7      exit 0
8  fi
9
10 exit 1
```

docker-compose up

This command is used to start the containers defined in the docker-compose.yml file. If the containers don't exist, they will be created.

```
docker-compose up
```

docker-compose down

This command is used to stop and remove the containers defined in the docker-compose.yml file.

```
docker-compose down
```

To delete all networks, images, and volumes with Docker Compose, you can use the following commands:

```
docker-compose down --rmi all --volumes --remove-orphans
```

- The `--rmi all` flag tells Docker to remove all images associated with the containers.
- The `--volumes` flag tells Docker to remove any volumes associated with the containers.
- The `--remove-orphans` flag tells Docker to remove any containers that were not defined in the docker-compose.yml file.

```
docker network prune  
docker volume prune
```

- The second command (`docker network prune`) will remove any unused networks.
- The third command (`docker volume prune`) will remove any unused volumes.

README.md

Example Voting App

A simple distributed application running across multiple Docker containers.

Getting started

The architecture diagram illustrates the distributed nature of the voting application. It consists of several interconnected components:

- vote**: Represented by a blue hexagon, this component interacts with the user interface and the .NET worker.
- .NET worker**: Represented by a purple rounded rectangle, this component consumes votes from the Redis store and stores them in the database.
- redis**: Represented by a red cube, this component stores votes collected by the vote component.
- db**: Represented by a grey elephant icon, this component stores the results of the votes collected by the .NET worker.
- result**: Represented by a green hexagon, this component displays the final results stored in the database.
- User Interface**: Represented by a person icon at a computer, this component interacts with the vote component.

Arrows indicate the flow of data between these components: the User Interface sends data to the vote component, which then interacts with both the .NET worker and the redis component. The .NET worker then stores the data in the db component, which is finally displayed by the result component.

- A front-end web app in [Python](#) which lets you vote between two options
- A [Redis](#) which collects new votes
- A [.NET](#) worker which consumes votes and stores them in...
- A [Postgres](#) database backed by a Docker volume
- A [Node.js](#) web app which shows the results of the voting in real time
